Throughput and time to finality

Every chain is a road. Two dimensions decide what you can build on it.

Wider road → more transactions per second

Shorter road → less waiting before the transaction is settled for good

Most chains buy one at the cost of the other. Avalanche does not.

avalanche

A **network of chains** built for real businesses

Same picture, three chains

Road width = throughput. Road length = time to finality.

Avalanche L1

0.75s

six lanes wide, and over before you blink

Ethereum

780s

13 minutes

Bitcoin

3600s

60 minutes

0.1s

0.75s

Tx

Tx

Tx

Tx

your transaction takes a lane

it does not queue behind everyone else

Send Successful

View in Explorer

No pending spinner. No “wait for 12 confirmations”. The receipt **is** the settlement.

team

Interoperable **network** of layer 1s.

A network of networks

Throughput scales by adding roads — not by widening one.

Each L1 picks its own validators, gas token and rules — and still talks to the rest natively.

MASSIVE COMBINED THROUGHPUT

one road per L1 — add an L1, add lanes

SHORT TIME TO FINALITY

0.75s on every road — it does not grow as L1s are added

 Validator

Layer 1 vs Layer 2.

Primary network. **Three** chains.

X-chain

Assets

Native assets with rules baked in equity, bonds, "can't trade until Tuesday."
Relevant to Wallets and exchanges.

C-chain

Contracts

A real EVM Solidity, Geth APIs, Hardhat, Foundry and other toolings.
Ship your existing Ethereum codebase.

P-chain

Coordination

Validators, staking, and the registry of every L1 on the network.
Custom chains get registered here.

Your chain. **Your rules.**

	Primary Network	Your L1
Virtual Machine	EVM. Fixed.	EVM or custom VM
Validator set	All of Avalanche	Whoever you say. Banks: KYC
Fee token	AVAX	USDC or gasless
Access	Permissionless	Public or consortium-only
Consensus Protocol	Fixed	Trade finality vs safety
Congestion	Shared	Nobody else's. Ever.

Your chain. **Your rules.**

A Bank

Validators must be licensed.
Chain private to the consortium.

→ permissioned
validator set

A Game

20M gas limit.
Fees: zero.
Players never see a wallet.

→ gasless
fee config

A Fintech

Fees billed in USDC,
user never touches a
volatile token.

→ custom
fee token

demo

The Guestbook.

Anyone signs. Every entry is stamped, public, and permanent — live on Avalanche.

Let's actually **do it.**

Come **build** with us.

Avalanche's community. We host the meetups, teach the workshops, run the campus chapters and put grants and mentorship behind your first project.

600+ members · 30 countries · 80+ universities
